

WL-11001 UNDERWATER GPS EXPLORER KIT

DESCRIPTION

The Underwater GPS Explorer Kit includes everything you need to get started with robust underwater positioning. The Master-D1 calculates the position of any Locator relative to the position of the Receivers. Combined with the integrated GPS and IMU, it will provide the absolute GPS position of the Locator.

With a small physical footprint, the kit is easily integrated into even the most compact equipment. It can be used retro-fitted to your underwater vehicle, or integrated through your umbilical.

The Underwater GPS Explorer Kit is running an internal webserver exposing a GUI and an API. Just power up and start exploring the underwater world!

BENEFITS

- Extremely small footprint makes for easy handling and operation.
- Highly robust operation in areas with reflections (shallow water, around installations etc.)
- Fully IP67 protected housing and connectors.

CONTENTS
